## Cleveland Life Expectancy Methodology and Data Table

Methods

Population data were calculated using a weighted average of 2000 and 2010 data obtained from the U.S. Census Bureau. Death count data were obtained from the Ohio Department of Health, Bureau of Vital Statistics. The most recently available years of death data (2004 to 2013) were aggregated into 19 age groups (see below) by decedent's residential zip code. The average number of deaths across the ten years was computed in order to match the single year of population data (weighted
average of 2000 and 2010) used. Death counts and population data were then entered into abridged life tables using the Chiang methodology ${ }^{1}$. The death counts and population counts for age groups with zero death counts were replaced with the corresponding death and population counts for Cuyahoga County. Zip codes with greater than $30 \%$ population change and population of less than 10,000 or with greater than $30 \%$ of the population in group quarters were excluded from analysis.

## Age Groups

| $<1$ Year |
| :--- |

The following table contains the life expectancy values for all the Cleveland area zip codes that were part of this project. The final life expectancy map was based on the values in this table:

| Zip Code | Life Expectancy at Birth | Zip Code (cont'd) | Life Expectancy at Birth (cont'd) | Zip Code (cont'd) | Life Expectancy at Birth (cont'd) |
